ST Range Introduction

Saltfire's 'ST' range is a selection of precision engineered high efficiency Ultra-Clean-burning stoves.
The results of thousands of hours research and development at our dedicated solid fuel research centre in Dorset. Saltfire engineers have been hard at work reducing smoke emissions these past few years, 'ST' stoves also feature extremely low CO, NOx, particle and Hydro-Carbon emissions. This advanced Clean-Burn technology is a huge leap forward for wood burners.

Designed for maximum efficiency and extremely clean-burning, all 'ST' models are certified with DEFRA for use in Smoke Control Areas in the UK.

The ST-X hybrid range incorporate the benefits of both heavy cast iron components and thick steel outer body which is up to 10mm thick.
Available in three kW sizes and now also all available in our new taller and slimline options. They have an amazing clean burn control and airwash for Ultra-Clean glass - We challenge any other stove brands to produce cleaner glass.

All are simple to operate and easy to maintain. All incorporate an advanced 'After-Burner' system for Super-Cleanburning and amazing flame pattern. Hot Air-Wash for clean glass and views of the fire as standard. We keep all models in stock at our factory warehouse in Dorset and can supply in a range of colour options.

For more information on SIA EcoDesign and ClearSkies standards visit www.clearskiesmark.org

All Saltfire & Peanut models are EcoDesign.

ST1/ST1 VISION

Designed with simple, easy to operate user friendly controls. Constructed using a triple-layer body, there is a precision engineered welded outer and inner steel body (air gap between layers) with thermo-refractory fire brick inner linings.

Designed with a large viewing window for amazing views of the fire. The flame pattern with the advanced “after-burner” system is quite unique.

The air-wash clean glass system is particularly impressive.

The ST1 Vision is a larger door/window version of the original ST1 model and are both dedicated wood burners only.

ST2

The Saltfire ST2 is a great looking modern design ultra-clean-burning wood and multi-fuel stove.

Designed with simple, easy to operate user friendly controls. Constructed using a triple-layer convection system, there is a precision engineered welded outer and inner steel body with thermo-refractory fire brick inner linings.

The ST2 is a multi-fuel stove able to burn wood logs and smokeless coal - the coal ashes will fall through the grate and into the ash pan which easily lifts out when full.

There is an air-wash system to help keep the glass clearer.

DIMENSIONS

ST4

The Saltfire ST4 is the larger version of the popular ST2 - and is a great looking modern design ultra-clean-burning wood and multi-fuel stove.

Designed with simple, easy to operate user friendly controls. Constructed using a triple-layer convection system, there is a precision engineered welded outer and inner steel body with thermo-refractory fire brick inner linings.

The ST4 is a multi-fuel stove able to burn wood logs and smokeless coal - the coal ashes will fall through the grate and into the ash pan which easily lifts out when full.

There is an air-wash system to help keep the glass clearer. The ST4 has a removable baffle plate to allow cleaning access to the flue.

ST-X4

Available in short and tall options

Constructed from a precision-welded thick steel body with cast iron door and thermo-refractory fire brick inner linings.

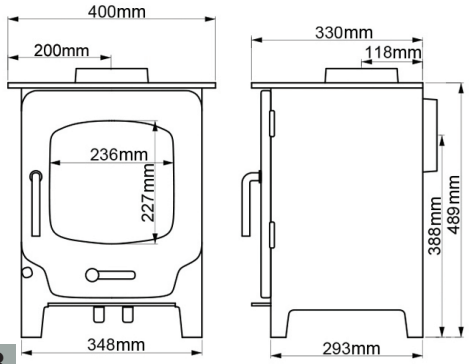

Many times cleaner than the required standard for "DEFRA" exemption, it can legally be used anywhere in the UK including the strictest of smoke control zones.

Designed with simple, easy to operate user friendly controls, has a large viewing window for amazing views of the fire. The flame pattern with the advanced "after-burner" system is quite unique.

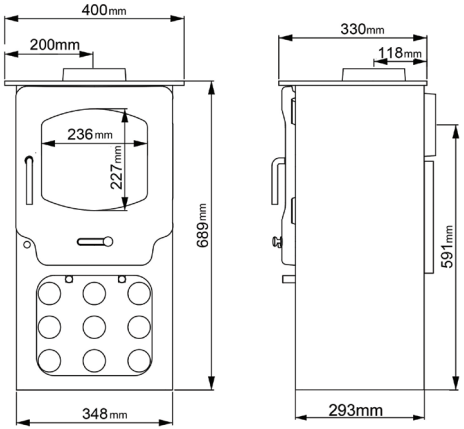

The ST-X4 is a multi-fuel stove able to efficiently burn wood logs or smokeless coal - the coal ashes will fall through the grate and into the ash pan which easily lifts out when full.
There is an air-wash system to help keep the glass clearer.

ST-X Wide

Available in short and tall options

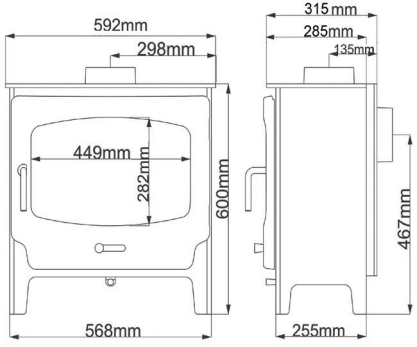

The ST-X Wide is designed to give the widest width and view of the fire whilst keeping the nominal rated output at 5kW.

As one of the widest 5kW stoves available in the UK, there are few rivals in this category. The depth is reduced allowing for easier insertion into shallow fire places or less intrusion into the room when free standing against a wall.

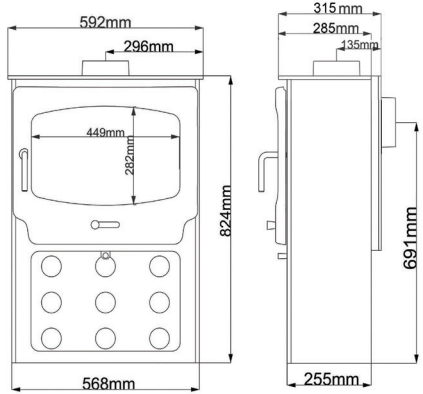

At the same time the wide firebox is retained allowing for longer logs to be used.

Saltfire Scout

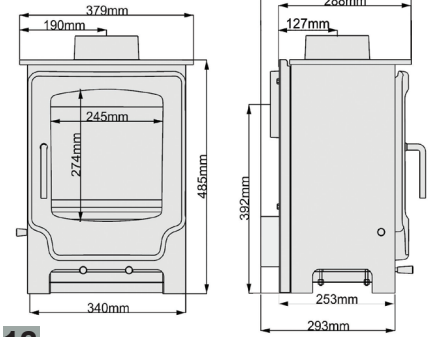

Available in short and tall options

A compact 4kW stove with a low distance to combustibles thanks to its rear and lower heat-shield fitted as standard.

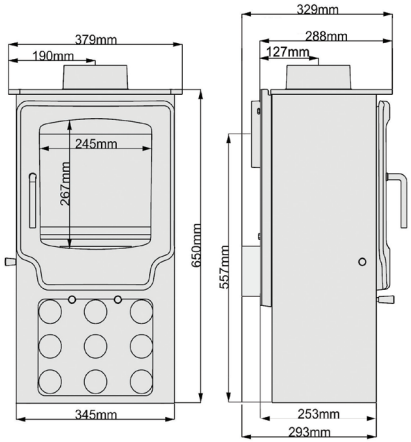

Being one of a tiny handful of compact EcoDesign Ready stoves with optional direct air box, it satisfies many requirements of modern Eco-Designed buildings, new builds and small living spaces such as boats, yurts or cabins.

Burnished Door

(Available on ST-X Models only)

The cast iron door is finished by hand with various polishing tools and abrasives to give a truly unique bare-metal look, then coated with a clear protective finish - no two are ever the same.

Parts of the door over time will then change through many different hues of subtle blues and purples as the stove is heated.

Peanut

Introduction

Wood stove technology and the understanding of wood stove design and engineering has moved on a lot in recent years. Most stoves may look like similar black boxes, but what goes on inside the burn chamber can be very different. The Saltfire Stoves Group is at the forefront of innovations in wood stove combustion and The Peanut range is the result of Saltfire's latest developments in clean-burning, high efficiency stove technology. Created at Saltfire Stoves Group Innovation Centre in Wareham, Dorset, they are designed to be very easy to operate, install and super easy to keep clean and maintain.

With a broad range of outputs on each model, you will have fingertip control to enjoy slower 'lazy flames', or a hotter 'roaring' fire, and anywhere in between – All whilst maintaining high efficiency using fewer logs but giving more heat when you need it. Available in several sizes and rated outputs, each with regular 'short' and 'tall' height options.

The Peanut range features all-cast-iron construction for maximum heat-retention and ultra-clean-burning, by keeping the belly of the fire hot even during 'low & slow' burning. Cast Iron construction also makes for an extremely rugged stove with long life.

We know of many cast iron stoves still going strong after 100 years or more, so if you are thinking "how long will my stove last?" – think of it becoming a family heirloom to be handed down to your great grandchildren! Used since the very first invention of wood stoves, Saltfire have chosen to use the reliable qualities of cast iron, brought up to date with the latest innovations in wood combustion technology.

User Friendly

In addition to technical advancements in terms of Clean burn and future proofing legal 2022 Eco-design/ERP standards, Saltfire have made the Peanut range their most user friendly ever. With a powerful boosted stream of air under the fire bed for rapid ignition and refuelling. This is an Eco-design range that consumers will instantly get on with.

Sweep/Installer Friendly

Simple to install and clean/Sweep with easy removable innards.

Key Features	
Woodburner	✓
Nominal Heat Output	4.7kW
High Efficiency	✓ 82.7%
EcoDesign	✓
Ultra Clean Burn	✓

SHORT DIMENSIONS

TALL DIMENSIONS

Peanut Range - Technical Specification

- **Ecodesign**
- **5 Year Warranty**
- **DEFRA Exempt** / Approved for Smoke Control Areas
- **High Efficiency**, Ultra-Clean-Burning
- All Have **Large Viewing Window**
- Superior Air-wash System for **Crystal-Clear Views** of the Fire
- Full Cast Iron Construction
- External Access to Ashpan for Clean, **Easy Ash Removal**
- Can Use 5”/125mm Flue System all the way (6”/150mm for Peanut 10)
- Can be used with Top or Rear Flue outlet
- Suitable for use on a **12mm hearth**

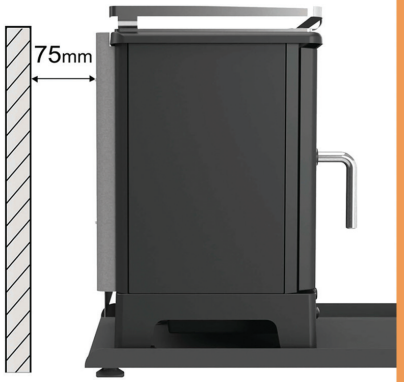

You can order a stainless steel cook plate top for any of the Peanut stove models. This allows for boiling a kettle, cooking with a frying pan or saucepan, or even a Dutch Oven. You can order this at the same time as the stove and we will fit your cook plate in our factory. We need to know if you are using the Top or Rear flue outlet on the stove. Using the Rear flue outlet will allow space for a full cook top. Using the Top flue will mean the cook top has a cut out for the flue pipe.

Distance to combustibles

Peanut 3 Marine

The Peanut 3. Designed for very small chimney openings and bridging the gap between standard domestic stoves and tiny home/ outdoor space/ glamping specific wood burners. With minimum clearances behind the Peanut 3 as low as 75mm, it is suitable for use in all sorts of combustible material clad buildings.
The highly effective double heatshield on the rear comes as standard on the Peanut 3.
The boat-specific version named ‘Peanut Marine’, with incorporated cook-top, fiddle rail and its compact marine tray, making it the perfect package for boat installations and much easier to comply with BS 8511:2010.
